

# PO DAAC Meeting 7.2.2015

## Attendance

Thomas Huang, Christopher Finch, Robert Toaz, Andrew Mitchell, Kathleen Baynes, Erich Reiter, prem gazula, Dana Shum, Dan Pilone

## Agenda

- Overview of Reconciliation
- Current Process
- Plans For the Future
- Timeline Development

## Helpful Links

[OPeNDAP](#), [OpenSearch](#), and the [CMR](#)

[Reverb](#)

[Earthdata Search](#)

## POC List:

ESDIS CMR Project Manager

[Andrew Mitchell](#)

ESDIS Architect

[Kathleen Baynes](#)

EED Chief Technologist

[Dan Pilone](#)

Earthdata, ECC, URS, Kayako, Cloud:

- Task Lead: Peter Plofchan ([Peter.G.Plofchan@raytheon.com](mailto:Peter.G.Plofchan@raytheon.com))
- Lead Engineer: Brett McLaughlin ([brett@element84.com](mailto:brett@element84.com))

CMR, ECHO, Earthdata Search Client:

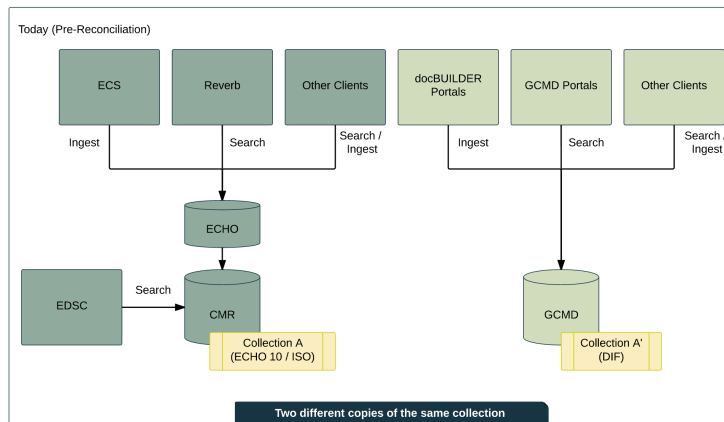

- Task Lead: Dana Shum ([dshum@raytheon.com](mailto:dshum@raytheon.com))
- Lead Engineer: Erich Reiter ([erich.e.reiter@nasa.gov](mailto:erich.e.reiter@nasa.gov))
- Operations Lead: Doug Newman ([douglas.j.newman@nasa.gov](mailto:douglas.j.newman@nasa.gov))

## Reconciliation Documents

[PO.DAAC Reconciliation Spreadsheet.xlsx](#)

## Pre-Reconciliation Metadata Flow

## Post-Reconciliation Metadata Flow

## Notes

### Current Process:

- Collections and Datasets are maintained in a local system called DMAS. Both datasets and collections are stored in Oracle and there is also a solr instance used for indexing and searching.
- Collections exported to xml and sent to ECHO via FTP Ingest. Often time collections are rejected because they don't have the required data
- Datasets are exported to DIF tarball and sent to GCMD. GCMD provides feedback and PO-DAAC resubmits if necessary
- PO-DAAC already has web services and portals (SLC) which are querying CMR directly in addition to querying data from DMAS. Noted that CMR data needs to have better quality to support their use cases. Team concurs and pointed out that data reconciliation is the first big step in that direction.

## Timeline / Milestones

- Team discussed that only one format needs to be submitted going forward (DIF, ECHO10, ISO, etc.). PO-DAAC will decide on source format by August 31, 2015
- PO-DAAC will then aim to have corresponding code updated by September 31, 2015 so that only one format is being exported to CMR/GCMD

- BEDI collections are in the process of changing also in the next few months
- DMAS is undergoing even further development changes which are expected to complete in early 2016
